Exercises for Section 4.2

- 1. Consider lists made from the letters T, H, E, O, R, Y, with repetition allowed. • Length 4 lists: 6x6x6x6
 - Length 4 lists that begin with T: 1x6x6x6
 - Length 4 lists that do not begin with T: 5x6x6x6
- 3 How many lists of length 3 can be made from the symbols A, B, C, D, E, F if...
- repetition is allowed: **6x6x6**
 - repetition is not allowed: **6x5x4**
 - repetition is not allowed and the list must contain the letter A:
 - (A, -, -) = 1x5x4(-,A,-) = 5x1x4

(-,-,A) = 5x4x1= 3(5x4)

• repetition is allowed and the list must contain the letter A: $|U| = 6x6x6, |X^c| = 5x5x5, |X| = (6x6x6) - (5x5x5)$

- 5 This problem involves 8-digit binary strings such as 10011011 or 00001010 (i.e., 8-digit numbers composed of 0's and 1's). • How many such string are there? 2x2x2x2x2x2x2x2
 - How many such string end in 0? 2x2x2x2x2x2x1 • How many such string have 1's for their second and fourth digits? 2x1x2x1x2x2x2x2
 - How many such string have 1's for their second or fourth digits?
 - $|A \cup B| = 2x1x2x1x2x2x2x2$ |A| = 2x1x2x2x2x2x2x2x2

|B| = 2x2x2x1x2x2x2x2 $= 2^7 + 2^7 - 2^6 = 192$

7 This problem concerns 4-letter codes made from the letters A, B, C, D, ..., Z.

• How many such codes can be made? 26x26x26x26 • How many such codes have no two consecutive letters the same?

letter 1: any of all 26

letter 3: 26 - the second = 25letter 4: 26 - the third = 25

26x25x25x259 A new car comes in a choice of five colors, three engine sizes and two transmissions. How many different combinations are there?

letter 2: 26 - the first = 25

Total length is 3, first is 5 colors, second is 3 engine sizes and last is 2 transmissions. 5x3x210 A dice is tossed four times in a row. There are many possible outcomes. How many different outcomes

Length is 4, a dice has numbers from 1 to 6. **6x6x6x6**

1. Five cards are dealt off of a standard 52-card deck and lined up in a row.

• How many such lineups are there that have at least one red card? $|U| = 52x51x50x49x48, |X^c| = 26x25x24x23x22$ (52x51x50x49x48) - (26x25x24x23x22)

red)?

Exercises for Section 4.3

- How many such lineups are there in which the cards are either all black or all hearts? They are not black cards that are hearts, so we use the addition principle:
 - All black cards: 26x25x24x23x22 All hearts: 13x12x11x10x9 (26x25x24x23x22) + (13x12x11x10x9)

3 Five cards are dealt off of a standard 52-card deck and lined up in a row.

There can't be black cards that are red, so we use addition principle: All black cards: 26x25x24x23x22

at least one upper case letter.

 $|U| = 52^5, |X^c = 26^5|$

 $|X| = 52^5 - (26^5 + 26^5)$

Odds: 1,3,5,7,9, total 5 numbers. =5!

odd?

- All red cards: 26x25x24x23x22 (26x25x24x23x22) + (26x25x24x23x22)
- 5 How many integers between 1 and 9999 have no repeated digits? 1-digit: 9, 2-digit: 9x9, 3-digit: 9x9x8, 4-digit: 9x9x8x7

• How many such lineups are there in which all 5 cards are of the same color (i.e., all black or all

9+(9x9)+(9x9x8)+(9x9x8x7)

• How many have at least one repeated digit? Using the substraction principle: $|U| = 9999, |x^c| = 9 + (9x9) + (9x9x8) + (9x9x8x7)$

|X| = 9999 - (9 + (9x9) + (9x9x8) + (9x9x8x7))7 A password on a certain site must be five characters long, made from letters of the alphabet, and have

 $|X| = 52^5 - 26^5$ • What if there must be a mix of upper and lower case? $|U| = 52^5, |X^c = 26^5 \cdot 2|$

3 How many 5-digit positive integers are there in which there are no repeated digits and all digits are

9 How many permutations of the letters A, B, C, D, E, F, G are there in which the three letters ABC

Exercises for Section 4.4

• How many different passwords are there?

- 5 Using only pencil and paper, find the value of $\frac{120!}{118!}$ $\frac{120 \cdot 119 \cdot 118!}{118!} = 120 \cdot 119$
- Exercises for Section 4.5 5 How many 16-digit binary strings contain exactly seven 1's? (Examples of such strings include 01110000111100 and 0011001100110010, etc.)

$C_{10}^4 + C_{10}^5$ • How many do not have exactly four 1's or exactly five 1's?

 $2^{10} - C_{10}^4 - C_{10}^5$

majoring in history?

523 = 100 + |B| - 33523 - 100 + 33 = |B|

|B| = 456

7 ffff

9 ffff

11 ffff

20 ffff

 $6 |X \in P(0, 1, 2, 3, 4, 5, 6, 7, 8, 9) : |X| = 4 |$ $= C_{10}^4 = \frac{10!}{4!6!}$

7 $|X \in P(0, 1, 2, 3, 4, 5, 6, 7, 8, 9) : |X| < 4|$

We can have a ϕ subset. Therefore $=C_{10}^0+C_{10}^1+C_{10}^2+C_{10}^3$

 $C_{16}^7 = \frac{16!}{7!9!}$

Exercises for Section 4.7

There are 13 cards in each suit and there are 4 suits. There are $C_{13}^5 \cdot 4$ different flushes.

19 A 5-card poker hand is called a flush if all cards are the same suit. How many different flushes are

1. At a certain university 523 of the seniors are history majors or math majors (or both). There are 100 senior math majors, and 33 seniors are majoring in both history and math. How many seniors are

15 How many 10-digit binary strings begin in 1 or end in 1? $|A \cup B| = ?$, $|A|(beging 1) = 1 \cdot 2^9$, $|B|(end 1) = 1 \cdot 2^9$

17 How many 10-digit binary strings are there that have exactly four 1's or exactly five 1's?

3 How many 4-digit positive integers are there that are even or contain no 0's? $|A \cup B| = ?, |A|(even) = 9x10x10x5, |B|(no\ 0s) = 9x9x9x9, |A \cap B|(both) = 9x9x9x4$ $|A \cup B| = (9x10x10x5) + (9x9x9x9) - (9x9x9x4)$

 $|A \cup B| = ?, |A|(end \ 1) = 2x2x2x2x2x2x2x2x1, |B|(four \ 1s) = C_8^4, |A \cap B| = 1 \cdot C_7^3$

13 How many 8-digit binary strings end in 1 or have exactly four 1's?

 $|A \cup B| = (2x2x2x2x2x2x2x1) + (C_8^4) - (C_7^3)$

 $2^9 \cdot 1, |A \cap B|(both) = 1 \cdot 2^8 \cdot 1$

 $|A \cup B| = 2^9 + 2^9 - 2^8$

 $|A \cup B| = 523, |A|(math) = 100, |B|(history) = ?, |A \cap B|(both) = 33$

Exercises for Section 4.8 1. ffff

appear consecutively, in alphabetical order? n = 7 - ABC = 5, 5!13 How many lists of length six (with no repetition) can be made from the 26 letters of the English alphabet? P(26,6) = 26x25x24x23x22x2115 In a club of 15 people, we need to choose a president, vice-president, secretary, and treasurer. In how many ways can this be done? P(15,4) = 15x14x13x1217 Three people in a group of ten line up at a ticket counter to buy tickets. How many lineups are possible? P(10,3) = 10x9x8
